Secreted TNF- α . TNF- α plays an important role in signal transduction. The signal can occur in many points. For example, until the epinephrine remains linked to a receptor, the receptor can activate a succession of protein G. Furthermore, each enzyme adenine cycle can convert numerous ATPs into cyclic AMP molecules. Other active enzymes in the route can also continuously phosphorylate proteins. 4th, 2024

Inferring signal transduction pathways from gene expression data ... A signal transduction pathway depicts cellular responses to internal or external environmental changes by activation or suppression of genes. Plant cells produce various internal signals, such as hormones, in response to environmental changes. 1th, 2024
