Process Control: Modeling, Design And Simulation The Process Dynamics And Control

Course is where students must gain an appreciation for the dynamic nature of chemical processes, and develop strategies to operate these processes. The major goal of this textbook is to teach students to analyze dynamic chemical processes and develop automatic control systems. Efficient optimization strategies, a crucial component is the efficient and accurate calculation of derivative information. Nowadays, this task can be addressed through the application of efficient automatic differentiation (AD) and sensitivity analysis.
